of yourself

Native Compost
Soil Conditioner is an
organic compost that
offers the correct balance of
nutrition, organic matter,
water retention and the
porosity in your soil.

native compost soil conditioner

The organic matter in
Native Compost Soil
Conditioner boosts the
beneficial life in
your soil.

Does my soil need soil conditioner?

■ WHAT IS NATIVE COMPOST

SOIL CONDITIONER? Most soil is lacking the nutrients needed to provide the best growing environment possible for their landscape. Native Compost Soil Conditioner is the end result of carefully processing a variety of organic materials. The compost boosts the beneficial life in your soil by providing a correct balance of nutrition, organic matter, soil porosity and water retention.

■ WHEN SHOULD I USE NATIVE COMPOST SOIL CONDITIONER?

Both professionals and homeowners are turning to the natural diversity of Native Compost to enrich their soils. This compost should be used to enhance the health of your plants by providing benefits and long-term improvements your plants will appreciate for years to come.

■ HOW DO I USE COMPOST SOIL CONDITIONER?

- **New Lawns & Gardens:** Till in 1" - 4" of the Native Compost before planting for great results.
- **Existing Lawns:** Scatter Native Compost lightly over your lawn & rake until it has penetrated into the soil.
- **Existing Flower Beds or as a Top Dress:** Cover the bed with approximately 1" of Native Compost for overall coverage. Can be blended with MooDoo™ Dairy Cow Manure for maximum results.
- **New Flower Beds:** Fully incorporate (mix in) all your soil amendments with your existing soil. The deeper the better, the more the better.
